Position Overview:

Our client, a $3B global organization headquartered, is seeking an experienced and forward-thinking Chief Information Officer (CIO) to lead its enterprise IT and digital transformation strategy. This executive will play a critical role in evolving the company's technology landscape— driving innovation, advancing data intelligence, and enabling scalable, AI-powered solutions across the business.

Reporting directly to the CEO, the CIO will oversee the entire technology function, including infrastructure, cybersecurity, data architecture, and enterprise systems, while also spearheading initiatives that harness artificial intelligence and digital tools to drive productivity, visibility, and competitive advantage.

Key Responsibilities:

- Lead the development and execution of the enterprise IT strategy to support long-term business growth, operational agility, and digital enablement
- Drive AI and automation initiatives to improve core operations, forecasting, customer experience, and internal decision-making
- Modernize legacy systems, unify enterprise platforms, and ensure robust data architecture and governance frameworks
- Oversee all enterprise applications, infrastructure, security, and IT operations, ensuring system integrity, uptime, and scalability
- Establish a forward-thinking, cloud-first IT roadmap, supporting business expansion and evolving customer needs
- Collaborate closely with other C-suite leaders to integrate technology into strategic planning, operational improvement, and commercial innovation

- Develop and mentor a high-performing IT organization with a strong focus on business partnership, delivery excellence, and cybersecurity
- Maintain compliance with regulatory standards and strengthen risk management across digital and IT systems

Qualifications:
- Bachelor's degree required; advanced degree in Information Systems, Engineering, or Business strongly preferred
- 15+ years of progressive leadership in IT, digital transformation, or enterprise systems, including 5+ years at the executive level
- Demonstrated success leading technology strategy and execution in a $500M+ global enterprise
- Strong understanding of AI/ML applications, enterprise data platforms, cloud architecture, and cybersecurity standards
- Proven track record of modernizing infrastructure and leading large-scale digital

- implementations
- Experience working in manufacturing, industrial, or asset-heavy environments preferred
- Ability to partner across commercial, operational, and executive functions to deliver enterprise value
- Excellent leadership and communication skills with experience influencing Boards and executive committees
